

School Project Report

COURSE CODE: SE-118

COURSE TITLE:

Civics and Community Engagements

REPORT TITLE:

The School Project Report

REPORT ASSESSMENT TABLE:

Obtained Marks	Total Marks

Submitted To: Dr. Ghousia Saeed.

Submitted By: Class No's # 03, 16, 18, 21, 26, 32.

Semester: 4th

Date: 07-06-2026.

Dept. of Software Engineering

UET Peshawar, Abbottabad Campus.

Instructor Sign : _____

Department of Software Engineering
University of Engineering and Technology, Peshawar, Abbottabad Campus

BSI-121/ SE-118: Civics and Community Engagement

4th Semester - Spring 2026

School Survey: A group of six students visited government high school to conduct waste audit activity.

Project Group:

19	24ABSWE0003	MUHAMMAD UMAR BASIT	Group 4	Government High School No. 1 Abbottabad (Male) (near high Court Abbottabad)	Monday, June 15, 2026
20	24ABSWE0016	ANAS ASHRAF			
21	24ABSWE0018	MUHAMMAD MEHTAB			
22	24ABSWE0021	MUHAMMAD DANIAL			
23	24ABSWE0032	SYED ZAMIR BUKHARI			
24	24ABSWE0026	IHSAN ULLAH			

SCHOOL INFORMATION

Field	Details
School Name	Government High School No.1 Abbottabad.
School Address	Jinnah Road Near High Court Abbottabad.
School on Map	It is not marked on map as we checked multiple times.

ACTIVITY INFORMATION

Field	Details
Activity Topic/Title	Waste Management Awareness Program
Date of Activity	15th June 2026
Class	Mixed (9th & 10th)
No. of Students	120

SCHOOL PLACEMENT REPORT

BEFORE THE PLACEMENT

Group's Preparation

We prepared for this activity over the course of a week before the actual school visit. Our group divided tasks among ourselves ; some members worked on the presentation content, some prepared the printed charts, and others took care of gifts and other chores.

Activity Plan

Our plan was to conduct a one-hour awareness session at the school. The sequence was:

1. Introduction to the topic and our group.
2. Interactive presentation on waste types, segregation, and recycling.
3. Chart distribution and activity for students.
4. Sweet distribution as a token of appreciation.
5. Career discussion related different professional fields particularly engineering fields.

Learning Objectives

Through this activity, we aimed to achieve the following objectives:

- Help students understand different types of waste. (organic, plastic, paper, glass, hazardous)
- Teach them the importance of waste segregation at source.
- Explain how recycling works and why it matters.
- Show them proper waste disposal techniques.
- Inspire them to consider careers in engineering, and related fields
- Encourage them to become responsible citizens who care about their community's cleanliness

Main focus: Understanding waste types and their recycling plus segregation.

Session Outline

Activity	Duration	Description
Introduction	5 min	Group introduction and topic overview
Waste Management Presentation	20 min	Explanation of waste types, segregation, recycling, and impacts of improper disposal
Chart Activity	15 min	Students received printed charts with pictures of areas (park, hospital, school, stadium) to identify waste and suggest disposal
Chart Explanation	10 min	Selected students explained their charts to the class
Sweet Distribution	5 min	Gifts distributed to all students
Career Discussion	10 min	Discussion on careers in medical and engineering fields

Educational Materials

We used the following materials:

- Printed charts with pictures of different areas (park, hospital, school, stadium, and other public places) showing waste present

Communication and Coordination with the School

Our course instructor contacted the school principal through the university's official reference. The principal gave us permission and confirmed the date and time.

Questions to Ask (Self-Assessment)

Question

Our Response

Is the content accurate and age-appropriate?

Yes. We kept the language simple, used visual examples, and focused on practical things students see every day like plastic bottles, food waste, and paper.

Is there a clear plan for engaging school students?

Yes. The chart activity was interactive, we asked questions throughout, and students responded very well.

Have roles been assigned among group members?

Yes. One member led the presentation, another distributed charts, another managed the sweet distribution, one stood there so student remain quiet and one handled photography and attendance.

AFTER THE PLACEMENT

1. Placement Report

Objectives

Our objectives for this school placement were:

- To educate students about waste types and their environmental impact.
- To demonstrate proper waste segregation and disposal.
- To promote recycling and circular economy thinking.
- To introduce students to career opportunities in medical and engineering fields.
- To encourage responsible waste habits from a young age.

Activities Conducted

The session was conducted in the school's main hall. Around 120 students from 9th and 10th grade participated along with their class teachers.

1. Introduction (5 min)

A group member introduced our team and explained why we were visiting. We shared that we are engineering students working on a waste management project at our university and surrounding. The students were curious and attentive from the start. We took proper start with Holy Quran recitation by one of the students.

2. Waste Management Presentation (20 min)

Presenter delivered the main presentation orally (no projector was available). We explained:

- What is waste and why it is a problem.
- Types of waste: biodegradable, non-biodegradable, hazardous, recyclable.
- The 5R principle: Refuse, Reduce, Reuse, Recycle, Rot.
- How to segregate waste using colour-coded bins (green for organic, blue for recyclable, red for hazardous)
- Environmental and health impacts of improper disposal.
- Simple steps students can take at home and school.

We used real examples: a plastic water bottle, a banana peel, a newspaper, and a chocolate wrapper; to show students exactly which bin each item belongs to.

3. Chart Activity (15 min)

We distributed 10 printed charts to groups of 4–5 students. Each chart had pictures of different areas with waste shown in them. The areas included:

Students had to identify the main waste produced in each area and suggest how to dispose of it properly. We walked around to help and guide them. They were very engaged and asked good questions like "What if there is no blue bin in our area?" and "Can we compost at home?"

4. Chart Explanation (10 min)

We called 5–6 groups to come forward and explain their charts to the whole class. Each group presented their identified waste sources and suggested disposal methods. Some students surprised us with very thoughtful answers. One student suggested that schools should have separate bins for paper and food waste. Another said we should stop using single-use plastic bags. We appreciated and encouraged all of them.

5. Sweet Distribution (5 min)

As a small gesture, we distributed sweets (from a local bakery) to all students. They were very happy and thanked us.

6. Career Discussion (5 min)

One of our group members spoke about career opportunities related to waste management and environmental protection. We discussed:

- Medical fields (doctors, public health specialists)
- Engineering fields (Environmental Engineering, Civil Engineering, Chemical Engineering, Software Engineering)
- Other IT Fields.
- Entrepreneurship.

We shared that studying engineering and medical sciences can lead to solving real-world problems like waste disposal, and that students can start preparing now by studying science and math seriously. Many students seemed interested and asked questions.

7. Number of Participants

Category	Number
Students	120 (Class 9th & 10th mixed)
Teachers	2 (class teachers)
Our Group Members	All 6 members

8. Challenges Faced

Challenge	How We Handled It
No projector available	We used printed posters instead of slides.
Large number of students (120)	We divided them into smaller groups for the chart activity
Some students were shy to speak	We encouraged them gently and called volunteers instead of forcing anyone.
Time management	We kept each activity strictly timed and moved quickly between sections
Noise level during group activity	We used their teacher to get attention when needed

9. Lessons Learned

- **Teaching is a two-way process.** We came to teach, but we also learned from the students' curiosity and fresh perspectives.
- **Children listen carefully.** Unlike university students, these school children were extremely attentive and respectful. They asked meaningful questions.

- **Career discussions inspire young minds.** Many students did not know that engineering could be linked to good work like environmental work. They seemed genuinely interested.
- **Small gestures matter.** The sweet distribution made students feel appreciated and created a positive ending to the session.

10. Evidences

The following evidence is attached with this report:

- Letter signed by the school's focal teacher with official stamp
- Photographs of the activity (presentation, chart activity, sweet distribution)

Figure 11 Signing Off

- Copies of the printed charts used during the activity.
- School verification letter.

11. Reflection

We learned a lot from this school placement experience. Initially, we were very confident in front of 120 school students and kept them engaged. They listened carefully, answered our questions, and even asked us questions we hadn't expected.

The most rewarding moment was during the chart explanation activity. Seeing young students explain waste segregation with confidence made us feel that our message was actually reaching them.

We also realized that many school students are not aware of career opportunities beyond the usual. When we talked about engineering and waste management as careers, many of them were surprised and curious. We felt that we had opened a new door of possibilities for them.

The challenges we faced – no projector, large class size, time constraints – taught us to be flexible and adaptive. We learned that teaching is not just about delivering content; it's about connecting with your audience and making the content relevant to their daily lives.

Overall, this experience was incredibly fulfilling. It gave us confidence in public speaking, taught us how to manage a session, and reminded us why community engagement matters. We hope to do more such activities in the future.

12. Suggestions for Future School Placement Activity

- **Use more visual aids** – Large posters, models, or even a short video (if projector available) would make the session even better.
- **Include a small quiz with prizes** – This would make the session more competitive and engaging for students.
- **Visit more classes or schools** – One session is not enough. A series of sessions over multiple weeks would create lasting impact.

- **Involve school teachers more** – If teachers continue the discussion after we leave, the learning will be reinforced.
- **Distribute informational pamphlets** – Students can take them home and share with family members.
- **Plan for hands-on activity** – For example, actually sorting waste into bins during the session.

13. CONCLUSION

This school placement activity was a meaningful and successful experience for our group. We were able to deliver awareness about waste management to 120 school students, teach them about segregation and recycling, and inspire them to consider careers in medical and engineering fields.

The students' enthusiasm and curiosity made the session enjoyable. Despite challenges like no projector and a large class size, we managed to conduct all planned activities within the allotted time. The chart activity was particularly effective as it allowed students to apply what they learned.

We also gained personally; confidence in teaching, ability to manage a large group, and a deeper appreciation for community work. The signed verification from the school and photographs serve as evidence of our activity.

We hope that the students we interacted with will carry forward the message of proper waste management and become responsible citizens. We are grateful to our instructor, the school principal, and the teachers for giving us this opportunity.
