Campus-Based Waste Audit Project (Adapted for Home and Nearby Surroundings)
Assignment 1- Waste Observation (Stage 1)

Semester: 4th - Spring 2026

Short Notes (3–5 lines)

Briefly describe, like:

- ✓ General waste patterns observed
- ✓ Any major problems in waste management
- ✓ Behaviour of people at selected site regarding waste disposal

General Waste Patterns Observed

During the observation, most of the waste found was plastic items such as bottles, wrappers, and bags. Food waste was also common, especially in the kitchen area. In many places, all types of waste were mixed together in one bin. Paper waste was also seen but it was not separated for reuse or recycling.

Any Major Problems in Waste Management

One major problem noticed was the lack of waste segregation, as almost all waste was disposed of in mixed form. In some areas, bins were either not available or not enough, which caused people to throw waste on the ground. Another issue was improper waste collection, leading to overflowing bins and scattered garbage in open spaces.

Behaviour of people at selected site Regarding Waste Disposal

The behaviour of people was mixed. Some individuals used bins properly, especially inside homes or rooms. However, in outdoor areas like streets and parks, many people were seen throwing waste carelessly. There was also a lack of awareness about separating waste, and most people did not pay attention to proper disposal methods.

Table 1: Observation of Waste Types and Management Practices

Area Observed	Date/Time	Types of Waste	Existing Waste Bins (Yes/No)	Bin Type (segregated / mixed)	Condition of Bins	Waste Collection Frequency	Behaviour Observed	Problems Identified	Pic No.
Home Kitchen	Day 1: Morning / Evening	Food waste, vegetable peels, plastic packaging	Yes	Mixed (single bin)	Sometimes full	Daily	Waste is thrown regularly in bin	No segregation of organic and plastic waste	1.
Street Area	Day 1 Afternoon	Plastic bottles, wrappers	No	Mixed (open bin)	Dirty & uncovered	Irregular	People throw waste on roadside	No bins available, littering common	2.
Park / Open Area	Day 2: Morning / Evening	Plastic bags, snack wrappers	Yes	Mixed	Often overflowing	Often Daily	Some people use bins, others throw outside	Bins are not enough, waste scattered	3.
Home / Store	Day 2 Afternoon	Paper, cardboard	Yes	Mixed	Clean but mixed waste	Daily	Waste placed in bin properly	No recycling or separation of paper waste	4.
Empty Plot / Nearby Area	Day 3 (Morning)	Mixed waste (plastic, food, bottles)	No	No bin system (open dumping)	No formal collection system	No proper system	People dump waste openly	No disposal facility, unmanaged dumping	5.

Table 2: Photo Documentation

Photo Number	Area	What the Photo Shows	Observation / Issue
1.	Kitchen/Home	Food waste in bin	No segregation
2.	Street	Plastic bottles	Littering observed
3.	Park / Open Area	Plastic wrappers	No bins available
4.	Home / Store	Paper waste	Mixed disposal
5.	Empty Plot / Nearby Area	Mixed garbage pile	Poor management

Photos:

Photo 1: Food waste in kitchen bin (Organic waste)

Green/Organic Waste: Food scraps, vegetable peels, leaves in kitchen bin

Photo 2: Plastic bottles in open area

Plastic Waste: Plastic bottles and containers in backyard bin

Photo 3: Plastic bags and wrappers in park

Plastic Bags & Wrappers: Plastic bags and snack wrappers in park

Photo 4: Paper and cardboard waste in study area

Paper & Cardboard Waste: Torn cardboard boxes, paper waste in home area

Photo 5: Mixed waste dumped in open space

Styrofoam, Tetra Packs, Glass:
Mixed waste including styrofoam, tetra packs, and glass
